

**Graduate School of Kyoto Institute of Technology (KIT)** will be accepting applications for our “International Graduate Program for Interdisciplinary Study in Science and Technology (IGP)” according to the following schedule.

Today: Flyer released

End of November: Application guidelines published (scheduled, may be brought forward)

Beginning of December until 20 December(Fri): Application period

\*KIT will notify you when the application guidelines are released.

The following three categories will be available through IGP.

A. Combined FOUR-year Master’s/Doctoral Course

B. TWO-year Master’s Course

C.THREE-year Doctoral Course

IGP provides international students with an opportunity to undertake interdisciplinary study in science and technology in all majors offered by KIT, with instructions and lectures given, in principle, in English.

Students applying for the following IGP sub-programs (EFM/SDI, currently pending approval) will have the opportunity to apply for KIT's own scholarship system in addition to the Japanese Government (MEXT) Scholarship.

- Human Resource Development Program for the Eco-Friendly Materials Manufacturing Sector (EFM)
- TECH LEADER Development Program for Semiconductor Device Manufacturing Leading to Disruptive Innovation (SDI)

The application guidelines are scheduled to be released in late November. Please use the attached flyer to widely publicize this to your students, and if there are any interested students, please inform KIT.

Also, because the period between the publication of the application guidelines and the application deadline is short, students who are interested in applying should consult with their student exchange coordinator at their home institution even before the application period begins, and contact their prospective supervisor at KIT to discuss their research plans.

Please refer to last year's application guidelines below.

[https://www.kit.ac.jp/en/prospective\\_student/international-graduate-program/](https://www.kit.ac.jp/en/prospective_student/international-graduate-program/)

We hope you will make this information widely available to your students and select the most suitable potential candidates.

Should you have any questions or require additional information, please feel free to contact us.

We look forward to welcoming your students to KIT.
